

Cycleclean® III & IV

FILTER MEDIA

Clean coolants mean better control of your process, longer fluid life, longer tool life and better control of your costs.

Cycleclean® FILTER MEDIA is recommended for filtration of fine particulates found in honing, lapping, polishing and whenever the debris is less than 5µm.

Cycleclean® FILTER MEDIA consists of polypropylene microfibers laminated between layers of continuous polypropylene fibers providing the high efficiency required for removing your smallest contaminants.

- Micro-denier Fibers provide high efficiency removal of your smallest particulates
- High strength
- Resistance to abrasion
- Excellent dimensional stability
- Stable up to 270° F (132°c)
- Thermally bonded with no chemical binders

Part Number	Oz./Sq. yd.	Caliper (in.)	Mullen (psi)	MD Tensile	CD Tensile	Frazier
